

What is claimed is:

1. A combination multiple warning signal light and motorized vehicle, the combination multiple warning signal light and motor vehicle comprising:
 - 5 a) a plurality of strip light emitting diode light sources engaged to an exterior of said vehicle, each strip light emitting diode light source having a visible exterior surface;
 - b) a plurality of light emitting diodes arranged about and attached to the visible exterior surface of each strip light emitting diode light source; and
 - 10 c) a controller in electric communication with the light emitting diodes, the controller constructed and arranged to selectively activate the light emitting diodes thereby producing more than two different types of visually distinct warning light signals, said light emitting diodes receiving power from a power source.
- 15 2. The combination of claim 1, the controller constructed and arranged to provide variable power intensity to the light emitting diodes.
3. The combination of claim 2, each of said strip light emitting diode light sources comprising a back side having an affixation member.
4. The combination of claim 3, wherein the controller independently controls the
- 20 5. The combination of claim 4, the controller having a microprocessor.
6. The combination of claim 5, said plurality of light emitting diodes comprising light emitting diodes of at least two different colors.
7. The combination of claim 6, the controller selectively activating the light emitting
- 25 8. The combination of claim 7, said strip light emitting diode light sources being constructed and arranged to be formed into a plurality of shapes.
9. The combination of claim 7, wherein the warning light signals are selected from
- 30 10. the group consisting of: a revolving light, a pulsating light, an oscillating light, a flashing light, a stroboscopic light, a modulated light, an alternating light, and any combinations thereof.

10. The combination of claim 7, wherein the plurality of light emitting diodes are in the form of an array.
11. The combination of claim 7, wherein the plurality of light emitting diodes are selectively illuminated to create the appearance of rotation.
- 5 12. The combination of claim 7, wherein the plurality of light emitting diodes are selectively illuminated to create the appearance of multi-colored rotation.
13. The combination of claim 7, the controller selectively activating and simultaneously displaying light emitting diodes to create a plurality of visually distinctive warning light signals.
- 10 14. The combination of claim 9, wherein the warning light signal is a directional indicator.
15. The combination of claim 7, further comprising a programmable external controller for programming said controller.
16. The combination of claim 7, wherein the motorized vehicle is a utility vehicle.
- 15 17. The combination of claim 7, wherein the motorized vehicle is an emergency vehicle.
18. The combination of claim 7, further comprising a cover enclosing said light emitting diodes.
19. The combination of claim 1, wherein the more than two different types of visually 20 distinct warning light signals are produced simultaneously.
20. The combination of claim 1, wherein the more than two different types of visually distinct warning light signals are produced independently of one another.
21. The combination of claim 1, wherein the more than two different types of visually distinct warning light signals are produced in at least one combination.
